

**Build up-date 15 July**

The sides of the Atrium are now being constructed. The highest point is a light well that is over the stairs and dining area. Seen from below, you really get a sense of its size. The well is 6m in diameter

This is the side view of the theatre. The main ceiling supports are in. This will also be the floor of the Art Barn

This is the foundations for DT. All three clusters now have the foundations in place.
